Election/Restrictions

An amendment of 1/30/07 amended claims 4, 6, 7, 19, 22 and 23, canceled claim 12, and added new claims 29-37.

Claims in the application are 4-9, 13-17, 19 and 21-37, which are all claims in the application.

Claim 13 depends on canceled claim 12, which depended on claim 23. Therefore, claim 13 is considered to depend on claim 23.

Restriction to one of the following inventions is required under 35 U.S.C. 121:

I. Claims 4-9, 13-17, 21, 23-28 and 30-37, drawn to a method for treatment of a cartilage lesion and for formation of a superficial cartilage layer, classified in class 424, subclass 426.

II. Claims 19,22 and 29, drawn to a method for treatment of a cartilage lesion and for formation of a superficial cartilage layer, classified in class 424, subclass 422.

The inventions are independent or distinct, each from the other because:

Inventions I and II are directed to related methods. The related inventions are distinct if the (1) the inventions as claimed are either not capable of use together or can have a materially different design, mode of operation, function, or effect; (2) the inventions do not overlap in scope, i.e., are mutually exclusive; and (3) the inventions as claimed are not obvious variants. See MPEP § 806.05(j). In the instant case, the inventions as claimed are different methods

such that each can be performed without the other. The method of invention I does not require steps a)-f) or a)-g) required by the claims of the methods of invention II. The method of invention II does not require a neo-cartilage construct prepared by any method, and a top sealant selected from components as required by the method of invention I. Furthermore, the inventions as claimed do not encompass overlapping subject matter and there is nothing of record to show them to be obvious variants.

Because these inventions are independent or distinct for the reasons given above and there would be a serious burden on the examiner if restriction is not required because the inventions have acquired a separate status in the art in view of their different classification, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention or species may be made with or without traverse. To reserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.

Should applicant traverse on the ground that the inventions or species are not patentably distinct, applicant should submit evidence

or identify such evidence now of record showing the inventions or species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C.103(a) of the other invention.

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
